Pre separator GA500

For collection and separation of material.

The GA 500 pre-separator has a volume of 570 litres (150 gal), of which 425 litres (112 gal) can be used for collection of material. The separator is mounted to a solid frame. A large container (not included) should be placed under the base. Alternatively, emptying can be carried out onto a conveyor belt. This is on condition that the separator is emptied often so that the amount of material per load is moderate and corresponds to the capacity of the conveyor belt.
