

Case Story

BenchTop extraction at manicure salon in Sweden

Situation: Nail shop manicure school is a Swedish company with three types of operation; whole sale of working materials to manicurists, training/education of manicurists, and a manicure salon.

Manicurists daily work with different types of varnishes, e.g. removers, acetone, nail varnish, which emit harmful and annoying vapours. The general ventilation did not solve the severe problems.

Solution: A Nederman EK500 BenchTop kit, (i.e. FX32 arm and CX5500 filter) was installed on the workbenches. This solution very efficiently captures the vapours directly at the work spot.

- Benefits:**
- The problem with noses stopped up, irritated eyes and asthma has already been dramatically reduced.
 - The noise level of EK500 is very low, a major advantage that this type of work is done in a quiet and relaxed spa-environment.
 - The kit is very easy and flexible to install as it is complete with arm, hose, filter/fan and table bracket.
