WARNING! Risk of personal injury!
Before starting any operation in the reel:
- Turn off the supply of air/water/oil/grease.
- Release the spring tension by disconnecting tool, if any, from the hose, removing the hose stop and allow the hose to recoil completely. Follow the instructions carefully when handling the spring.

Dismantling

1. Unscrew the blue cover.
2. Remove the spring lid and hub. Use a tool if necessary.

3. IMPORTANT!
Check the rivet which holds the spring together and is positioned at the spring periphery. If the rivet is damaged, the spring must not be removed from the drum. The cassette with outlet arm including spring must in that case be changed as one unit.

4. Fit the plastic stripes to the spring. The stripes comes in the package together with the new spring.

5. Remove the damaged spring.
ASSEMBLING

6 Mount the new spring.

7 Remove the plastic stripes.

9 Fasten the blue cover with packing.

10 Tighten the spring by turning the drum in the outlet direction with all hose wound on, 2 - 4 turns.

11 Put the supply hose through the hose outlet and fasten the hose stop.

12 Fasten possibly tool on the supply hose.

13 Check that the required length of hose can be pulled out without stretching the spring to its limit.

 Depositing of used spring unit
The used spring should be deposited to steelworks for remelting or handled according to valid deposit rules.
