WARNING!
Risk of personal injury!
Before starting any operation in the reel:
- Turn off the supply of air/water/oil/grease.
- Release the spring tension by disconnecting tool, if any, from the hose, removing the hose stop and allow the hose to recoil completely.

Dismantling
1. Loosen the intake hose from the swivel.
2. Dismantle the reel from wall or ceiling.
3. Unscrew the blue cover.
4. Unscrew the bracket with clamp.
5. Loosen the spring hub and possibly fitted additional spring unit.
6. Pull the spring unit with outlet arm from the drum shaft.
7. Unscrew the hose outlet from the outlet arm.

Assembling
8. Mount the new spring unit with outlet arm in the drum. If a new spring hub is used its inner side first must be greased.
9. Remount the hose outlet on the outlet arm.
10. Fit possibly additional spring unit.
11. Fasten the bracket with clamp.
12. Fasten the blue cover with packing.
13. Tighten the spring by turning the drum in the outlet direction with all hose wound on, 2 - 4 turns.
14. Put the hose through the hose outlet and fasten the hose stop.
15. Mount the reel on intended place.
16. Fit the intake hose on the swivel.
17. Fasten possibly tool on the supply hose.
18. Check that the required length of hose can be pulled out without stretching the spring to its limit.

WARNING!
Risk of personal injury!
Use protection gloves and handle the spring unit and the drum with care. Never dismantle the spring unit.

Depositing of used spring unit
The used spring unit should be deposited to steel-works for remelting or handled according to valid deposit rules.
