

NC cyclone

Basic cyclone to separate large materials from the airflow

The cyclone is a separator that uses centrifugal force to purify air loaded with chips or dust. Its performance depends on the rotation speed, density and grading of particles. Cyclones are available with a wide range of accessories.

- Efficiency approx. 90% for particles above 10 micron.
- Higher efficiency for large particles.
- Built in 2 and 3 mm (.08 in and .1 in)-thick steel sheet depending on the size.
- Max temperature 75°C (167°F) with standard paint.

Produto	NC cyclone
Instalação	Exterior
Material	2 and 3 mm (.08 in and .1 in)-thick steel sheet

**Painéis de explosão na saída Tangencial EX calculados com base nos índices de poeira listados na Tabela de Poeira. Para ciclones que trabalhem com poeira potencialmente explosiva, o Cliente deve fazer um cálculo adicional para a área de ventilação. A área de alívio na saída tangencial EX pode ser muito pequena para as condições específicas e toda a instalação.*
