

MJB-H

Tubular Bag Filter

The MJB-H comprise an innovative range of robust, versatile tubular bag filter unit that build upon the experience of the well-established MJB bag filters.

By combining the advantages of two stage immersion type cleaning valves with the patented UniClean technology, maximum cleaning efficiency is achieved with very low energy consumption and minimal maintenance.

All access for maintenance is from the top of the unit.

The modular design, with several bolt together assembly options is optimized for transport by road or by sea container.

It also maximises flexibility on site, to suit available facilities.

Filter sizes from 295 m² to about 1770 m² are available as preassembled units.

The modular design enables larger units to be assembled and also existing units to be extended whenever required.

Features

Robust welded steel construction

Versatile modular design

Weather proof for exposed locations

Flat pack dirty air chamber option for efficient transport by road or sea container.

May be extended or relocated if required

Efficient cleaning with patented UniClean technology

Integral pre-separation section

Down flow / cross flow inlet air pattern to maximize dust handling capacity

Low maintenance, with access from the unit top

Two bag lengths available

Higher temperature options including trace heating and insulation

ATEX compliant for explosive dusts

Nom du produit	MJB-H
Installation	Extérieur
Méthode de décolmatage	[CompressedAir]
Application	Poussière
Pression de fonctionnement (kPa)	Standard: -6,0 to 2,0 Optional: -10,0 to 5,0
Surface filtrante (m²)	295 to 1770
Capacité (débit max m³/h)	190000
Operating Temperature	Max. 220° C
Type de filtre	Filtre à manche

MJB-H

Nombre d'éléments filtrants	Poids (kg)	[model]
10	4350 (without hopper)	MJB295/H/10-10

MJB-H

Inlet air (raw gas) and clean air outlet connections

The dirty air enters at high level through the side of the dirty air chamber (as illustrated), or alternatively via the top of the dirty air chamber. It passes downwards through a generously sized pre-separation chamber, and then into the bag-house via a slotted profiled barrier to protect the bags from abrasion in a part cross flow and part down flow pattern, thus eliminating unwanted upward velocity effects. The outlet air connections are at high level directly from the clean air chamber. These may be situated at the sides or end of the clean air chamber. Rectangular connection flanges are normally provided.

For the MJB-A, the dirty air chamber comprises two sections of the type illustrated, one mounted on top of the other to accommodate the 4.1m long bags.

For the MJB-H, the dirty air chamber comprises three sections of the type illustrated, mounted on top of each other, to accommodate the longer (6.1m) bags.

MJB-H

Chambers:

A) Clean Air chamber

B) Dirty air chamber section
- Upper (MJB-A and MJB-H)

C) Dirty air chamber section
- Middle (MJB-A and MJB-H)

D) Dirty air chamber section
- Lower (MJB-H only)

NOTE: Typical compressed air consumption based upon cleaning cycle max. 3 minutes

Single valve pulsing for units up to MJB 708

Two valves pulsing together for units up to MJB 1062

Three valves pulsing together for units up to MJB 1416

Four valves pulsing together for units up to MJB 1770

MJB-H

Hopper heights are typical values for 55° valley angle trough hopper

* The Clean Air Chamber height includes toe board
