

Manifold parts on tool, on torch extraction

Dust extraction at source is the most effective method to capture dust when grinding, sanding and cutting.

Nederman attachment kits for hand-held tools, remove dust very efficiently during grinding, sanding and cutting. These operations create large amounts of dust. Airborne dust and fine particles can be hazardous to the human health and should be extracted at source before it reaches the breathing zone. The operator should always be protected from inhaling dust. On-tool extraction provides effective extraction and also ensures excellent freedom of movement and operator flexibility. Nederman attachment kits can be attached to both electric and pneumatic tools.

- Any dust created is captured at source

Product name	Manifold parts on tool, on torch extraction
Note	For electric tools - The kit is composed of suction hose and coupling M40-xxP.
