

GA200 Pre-separator

Coarse material separator

Pre-separator consisting of a steel lid with an inlet and an outlet for connection to the pipe work for pre-separation of coarse material, metal chips and cutting fluids.

The lid can be placed on top of a standard size 200 litre oil drum with a diameter of 600mm.

To empty the unit the vacuum must be switched off and the lid removed. The lid should be connected with a flexible hose for easy access. Sponge rubber gasket included.

Note: the 200 litre oil drum is not included.

-
- Protects the system and removes coarse material
 - Easy to install
 - Can be fitted to existing systems
