

ServiceGate for heavy vehicles

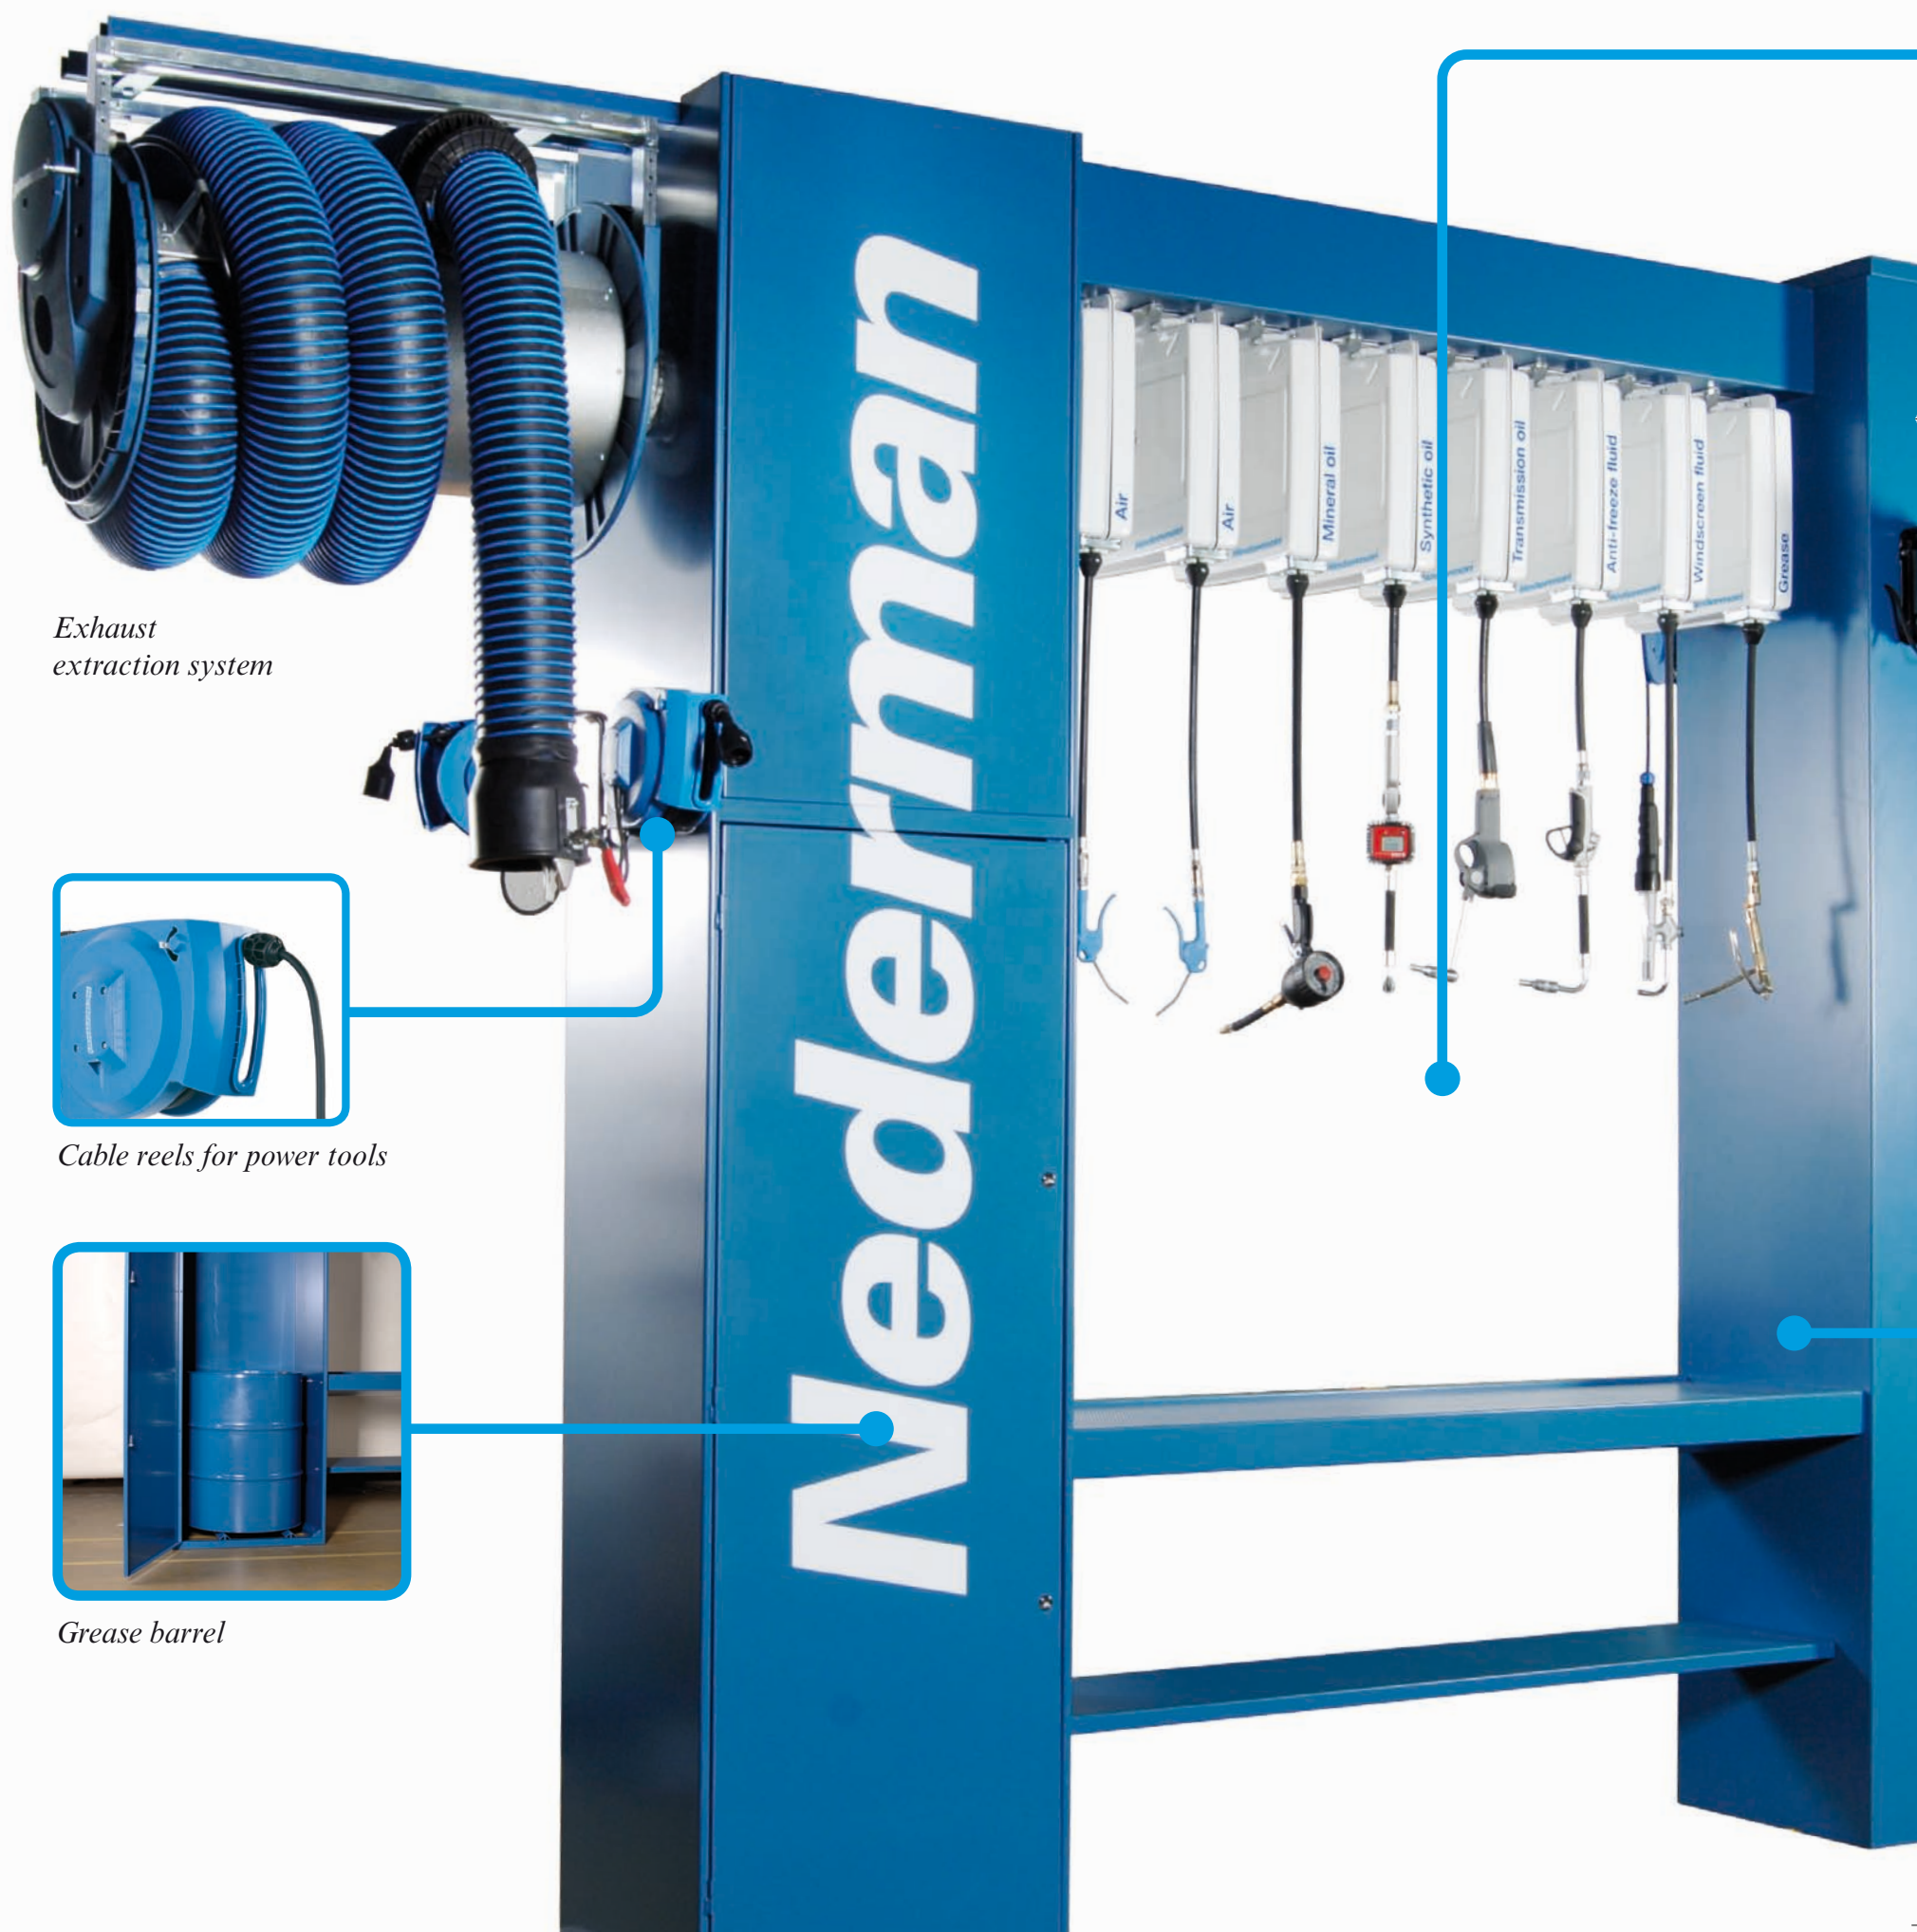

The gateway to efficient, convenient and economical service

Nederman

The gateway to efficient, convenient and economical service

The Nederman ServiceGate greatly simplifies service work on trucks, buses and other types of heavy vehicles by providing easy access to all media and a comprehensive overview of all supply functions. Air, water, oil, antifreeze and other fluids are readily available from a battery of practical self-retracting hose reels. To meet complete servicing requirements, the ServiceGate also features compressed air hoses, power cables and lighting facilities. Service personnel can now avoid going

to the main stores every time more oil or other fluids are needed. Work can be carried out much more safely, thanks to the floor being kept clear of cables and hoses, often easily damaged by vehicles driving over them. And you will have a clean and healthy workshop environment as exhaust fumes are removed directly from the exhaust pipes. The ServiceGate even includes vacuum cleaning equipment for keeping vehicles and workplaces free from dust and waste particles.

Exhaust extraction system

Cable reels for power tools

Grease barrel

*Mobile Oil Service Caddy (optional).
A convenient oil supply unit for vehicles that
cannot access the ServiceGate*

*Hose reels can be equipped with different nozzles
and metering tools*

*Vacuum cleaner
and work lamp*

Oil management terminal

Keep track of every drop!

Are you fully aware how much oil and other liquids are used when servicing a vehicle? Experience shows that on average around 20 % of the total volumes used are never even recorded for invoicing and those that are, are often too small.

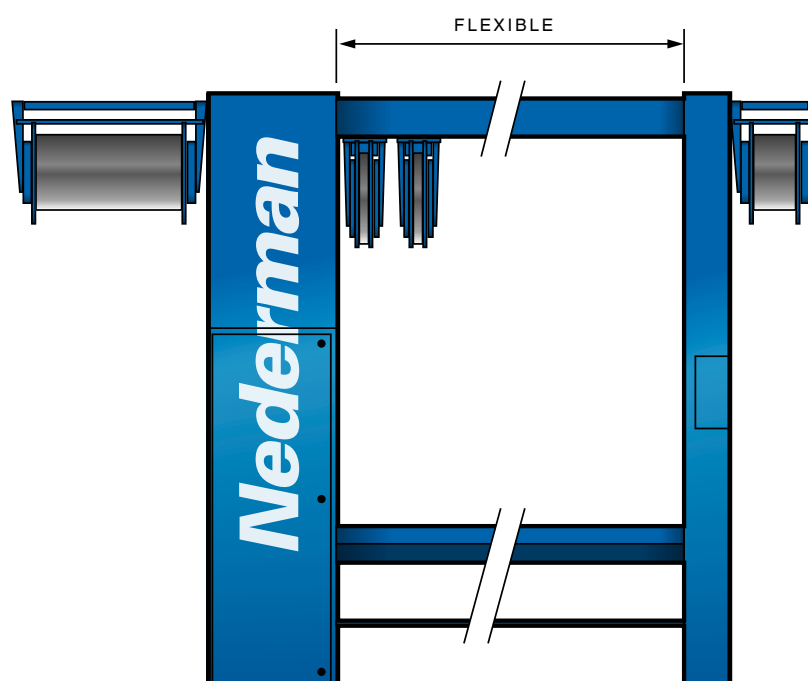

The Nederman ServiceGate will give you full control over all oils and liquids used. Every quantity supplied to each vehicle can be recorded for later reference when invoicing customers. You can even preset and automatically register the precise volumes required for a specific vehicle. Whichever method you use, you will be in complete control of all quantities supplied and be able to reduce unnecessary and costly wastage.

Nozzles and metering tools

The Nederman ServiceGate can be equipped with different types of nozzles for different applications. For example, there are nozzles for oil with analogue or digital meters and for automatic supply of preset volumes.

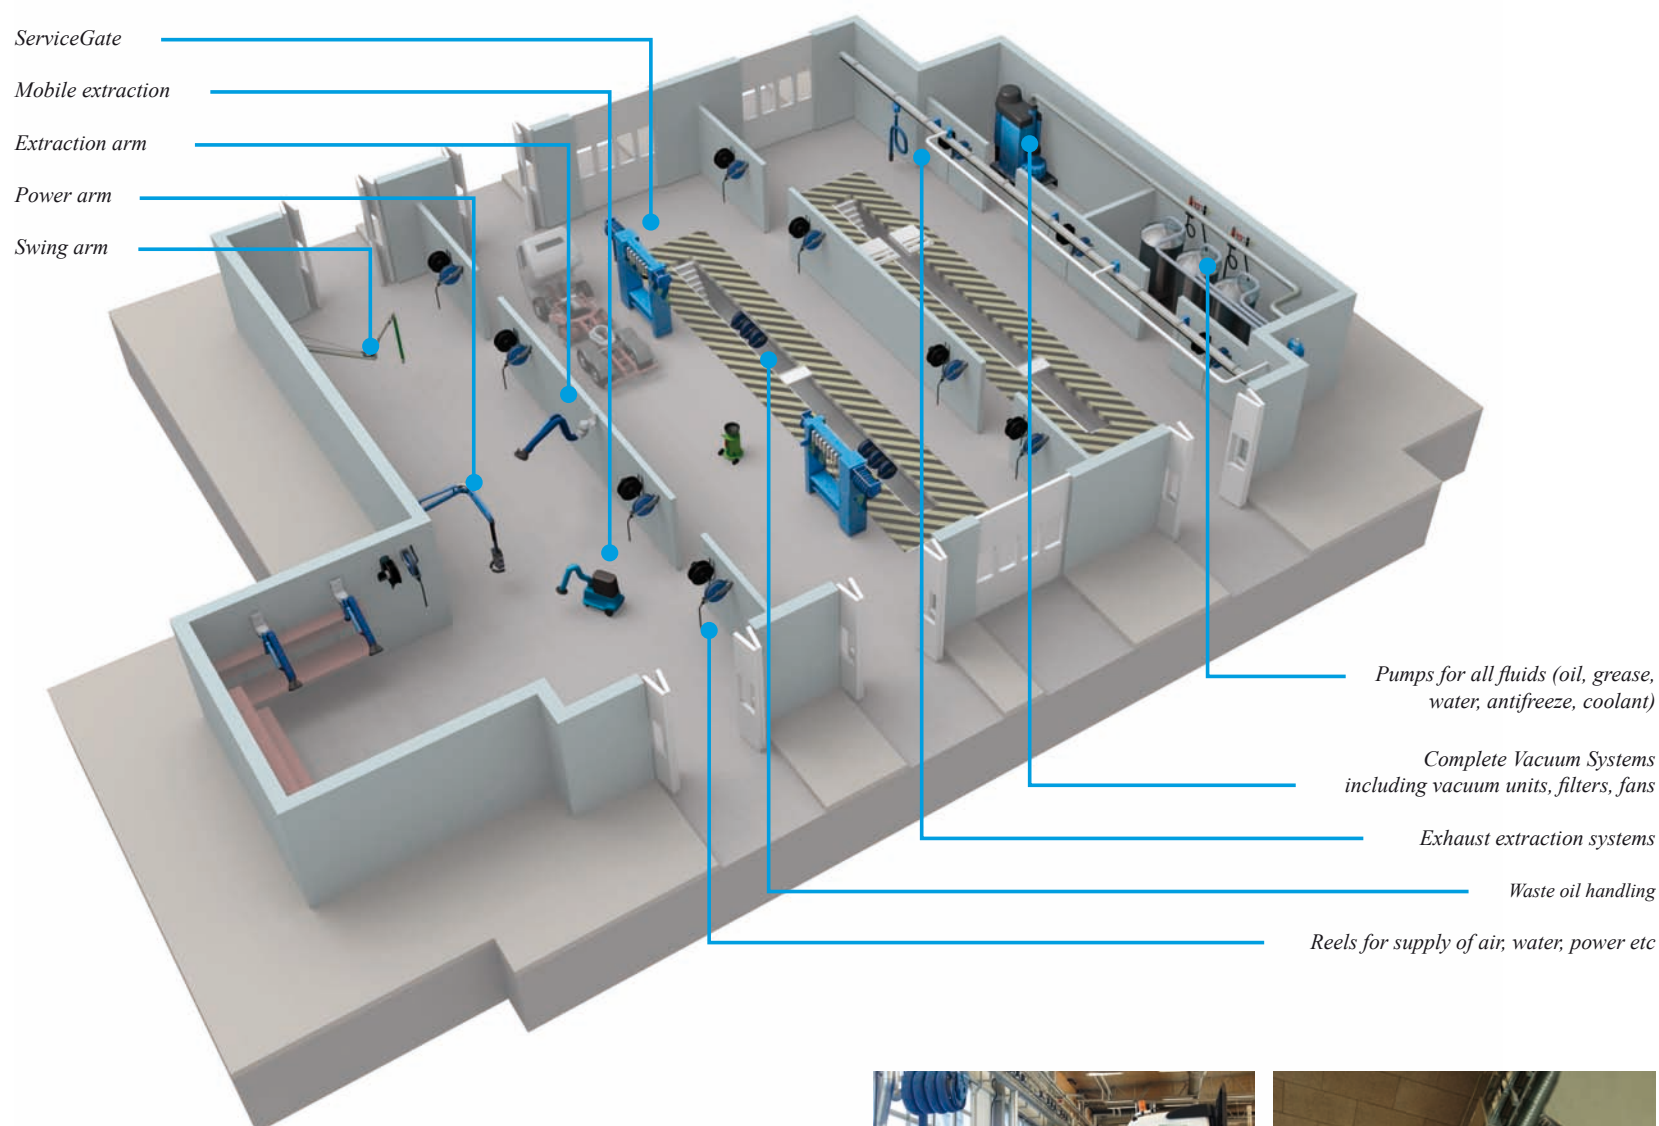

Modules for easy customisation

The Nederman ServiceGate comprises a number of standard modules. Depending on requirements, it can be fitted with supply hoses for different media as well as self-retracting reels for power, compressed air, exhaust extraction and vacuum cleaning. The towers have a fixed height of 3,300 mm while the length of the beam can be adapted to suit the required number of reels. All necessary hosing and piping in the ServiceGate is preinstalled and can be connected directly to the central supply systems on installation.

*The Nederman ServiceGate can service
at least two vehicles simultaneously.*

One-Stop WorkShop solutions

Having a prosperous business is often a question of having healthy and efficient working conditions. A safe, tidy and clean workshop always makes a good impression and will greatly strengthen your company's image.

Nederman offers practical and cost-effective products as well as complete system solutions for the automotive industry. These include an extensive range of products for the removal of exhaust fumes, on-tool fume and particle extraction solutions for grinding, sanding and welding, and high-vacuum cleaning equipment. Optional equipment for creating efficient workstations includes self-retracting reels, swing arms and multi-supply terminals with practical connections to air, liquid and power supplies and extraction systems.

Nederman's One-Stop Workshop concept encompasses everything from design and planning to installation, service and maintenance. Effective and environment friendly workshops can be created with the help of Nederman's NedQuote quotation and design tool.
