High Vacuum Control Panel (HVCP)

Takes your high vacuum system to next level

High Vacuum Control Panel (HVCP)

- ✓ Color touch panel
- ✓ Emergency stop
- ✓ Integrated ASC (Anti Surge Control) for VAC
- ✓ Configurable for specific system needs
- ✓ IoT Ready or IoT upgradeable

The High Vacuum Control Panel (HVCP) series optimizes your high vacuum system. It controls the vacuum unit and FlexFilter with increased flexibility and visibility by the graphic color Touch Panel. It is prepared for a large number of control and supervision functions.

The IoT panels are ready to connect to Nederman Insight Analytics. The data generated can help to get information about the filter status e.g. dP across filter, filter cleaning efficiency and duct vacuum. It can further provide early detection of worn out bearings or unbalanced fan blades and monitor compressed air to ensure cleaning. The premium panels enable more control and are suitable for combustible dust (EX) applications.

High Vacuum Control Panel (HVCP)

Certificaciones	CE, EX
